EXPERIENCE

METAZONE | FULL STACK DEVELOPER

Jan 2023 – Present | Houston, TX

- Build and ship two full-stack applications end to end in TypeScript, from React and Vue interfaces through RESTful Node.js APIs.
- Own the on-chain transaction processing flow end to end by designing a BullMQ event pipeline that reconciles over 1,000 transactions, keeping transaction status consistent with internal system state.
- Build an event-driven caching strategy in front of third-party APIs that caches the initial payload, subscribes to a WSS stream, and re-validates affected entries as events arrive, keeping the cache fresh in real time while cutting per-call cost and rate limit pressure.
- Design database schema and own migrations in PostgreSQL, analyzing indexes and query performance with EXPLAIN ANALYZE.
- Use Claude for scaffolding, refactors, and first-pass tests, using skills and MCP tooling.

UPBRAINERY | PROJECT MANAGER

Feb 2020 – Jan 2023 | Houston, TX

- Led a cross-departmental software product evaluation through vendor sessions and market fit requirements gathering, and align with key stakeholders.
- Supported internal employees understanding the product, troubleshooting issues and translating their requests into changes with the development team.
- Built internal UI/UX design prototypes and iterated on them with feedback from product stakeholders.

IDEA LAB KIDS | TECHNOLOGY SUPPORT INTERN

Apr 2019 – Aug 2019 | Houston, TX

- Maintained corporate and franchisee websites in WordPress.
- Built a proof-of-concept augmented reality environment using the Three.js and A-Frame JavaScript libraries.

PROJECTS

SOL BRACELETS | FULL STACK DEVELOPER

Jan 2019 – Present

- Built a custom e-commerce storefront end to end in React, backed by an Express.js REST API and MongoDB, including a persistent cart layer.
- Implemented custom authentication and authorization with JWT delivered in httpOnly cookies.
- Introduced a Redis caching layer using a lazy caching pattern on frequently requested catalog and product data, serving redundant reads from memory instead of a database round trip, reducing network latency.
- Implemented a per-IP fixed window rate limiter to prevent API abuse, returning 429 responses with Retry-After and rate limit expiration headers so clients know when they can retry..
- Migrated the front-end from React 16 on Create React App to React 18 on Vite, resolving breaking changes across the dependency tree.

EDUCATION

NAU

BACHELOR OF SCIENCE: COMPUTER SCIENCE WITH A CONCENTRATION IN SOFTWARE ENGINEERING
2019 | Houston, TX

SKILLS

PROGRAMMING

4+ years:

Node.js/JavaScript • HTML/CSS • React/Vue

3+ years:

TypeScript • SQL

1+ year:

Python • MongoDB

BACKEND & DATA

REST API design • PostgreSQL
Schema design • DB Migrations
Redis

TESTING

Unit & integration testing
Node.js services

CLOUD & INFRASTRUCTURE

AWS (S3, EC2) • Linux/UNIX
Nginx • CI/CD • Git/GitHub

AI TOOLING

Claude Code • MCP servers
Agentic development workflows

DESIGN/PROTOTYPING

AdobeXD • Figma
