EXPERIENCE

METAZONE | FULL STACK DEVELOPER

Jan 2023 – Present | Houston, TX

- Build and ship full-stack applications end to end in TypeScript, from React and Vue interfaces through RESTful Node.js APIs.
- Design REST APIs using Zod schemas that serve as a single source of truth for request validation, giving a type-safe contract to frontend and downstream consumers.
- Optimize backend performance by running K6 load test with p99 latency thresholds on the most critical endpoints. Then optimized database queries and caching paths over third party providers until the threshold where sustained.
- Lead project from ambiguous requirements through specs, API design, and data models, then deliver in a production environment.
- Integrate third-party APIs and services for transaction processing and asset data, including a RabbitMQ event pipeline that syncs long-running transactions with user-facing state.
- Use Claude for scaffolding, refactors, and first-pass tests, using skills and MCP tooling.

UPBRAINERY | PROJECT MANAGER

Feb 2020 – Jan 2023 | Houston, TX

- Led a cross-departmental software product evaluation through vendor sessions and market fit requirements gathering, and align with key stakeholders.
- Supported internal employees understanding the product, troubleshooting issues and translating their requests into changes with the development team.
- Built internal UI/UX design prototypes and iterated on them with feedback from product stakeholders.

IDEA LAB KIDS | TECHNOLOGY SUPPORT INTERN

Apr 2019 – Aug 2019 | Houston, TX

- Maintained corporate and franchisee websites in WordPress.
- Built a proof-of-concept augmented reality environment using the Three.js and A-Frame JavaScript libraries.
- Maintained the project repository and migrated dependencies across breaking version upgrades.

PROJECTS

WARRIOR BRACELETS | FULL STACK DEVELOPER

Jan 2019 – 2022

- Built a custom e-commerce storefront end to end in React, with Express.js REST API backend and MongoDB for product, cart, and order data.
- Migrated the frontend from React 16 (Create React App) to React 18 on Vite, resolving breaking dependency tree and cutting cold start and rebuild times during development.
- Owned the full stack as a single deployable application, from component state and routing through API design to the data layer.

EDUCATION

NAU

BACHELOR OF SCIENCE: COMPUTER SCIENCE WITH A CONCENTRATION IN SOFTWARE ENGINEERING
2019 | Houston, TX

SKILLS

PROGRAMMING

4+ years:

Node.js/JavaScript • HTML/CSS • React/Vue

3+ years:

TypeScript • SQL

1+ year:

Python • MongoDB

BACKEND & DATA

REST API design • PostgreSQL
Schema design • Migrations
Redis

TESTING

Unit & integration testing
Node.js services • Anchor programs

CLOUD & INFRASTRUCTURE

AWS (S3, EC2) • Linux/UNIX
nginx • CI/CD • Git/GitHub

AI TOOLING

Claude Code • MCP servers
Agentic development workflows
